

VOICE DOCUMENT WITH EMBEDDED TAGS

ABSTRACT

An digital audio file can include first digitized information specifying at least two types of audio content and second digitized information specifying a set of tags. The set of tags can include an opening tag indicating a beginning location within the audio file of a type of content and a closing tag indicating an ending location within the audio file of the type of content. The set of tags is associated with the type of audio content for which the set of tags indicates a beginning and an end.
